

Specially designed surfaces to protect document storage

Whichever configuration you choose from this easy order document shelving, will be finished to the highest standards.

Part of its design is to include neat rolled front edges. This allows for the safe and comfortable retrieval of files and documents from the bays without damage.

Each centre shelf is adjustable allowing you to make the most of available space easily. Document shelving is ideal to store archive material and 'good looking enough' to be accepted in any busy office. The powder coated finish together with the quality of manufacture ensure that you will receive a product that will stand up to all the rigours of any mainstream office environment.

There are many extra options that can be added to the system.

Many large companies and Government departments specify this type of shelving as it is comfortable to work with and safe and easy to extend as their requirements change. You can either buy the simple bays (shown opposite) or - if you have a larger or more complicated requirement our technical advisors will be happy to visit you on site.

A simple yet very effective design creates a highly efficient storage facility to complement any office.

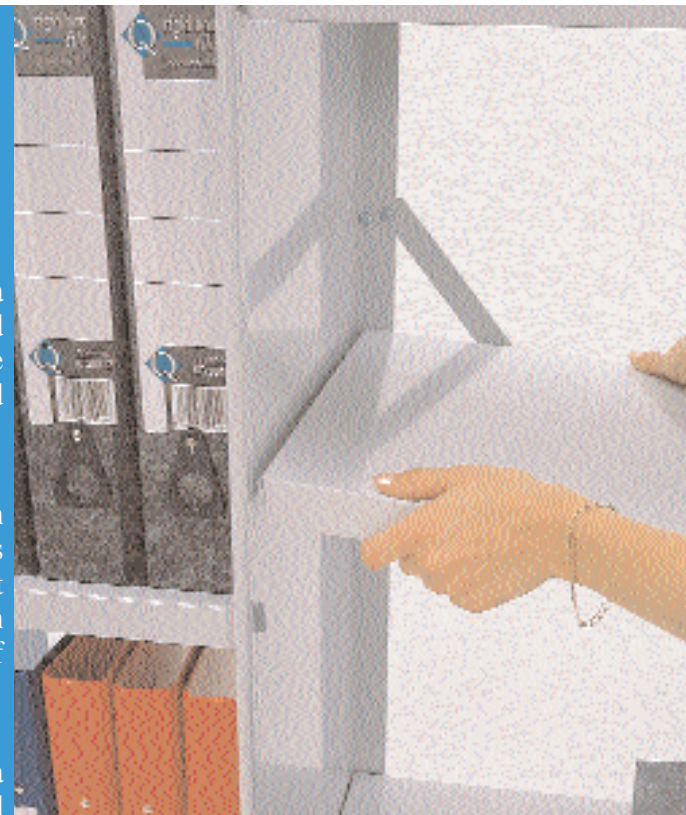

The system includes a combination of fixed and adjustable shelf storage levels that can be specified as either ...

- **Open bays ...**

as shown here - which include the solid endframes with a simple rear bracing at the back of the bay - often used for larger files of archive boxes or;

- **Closed bays ...**

which are supplied with a sheet steel back, used generally for the smaller items which may be displaced off the shelf.

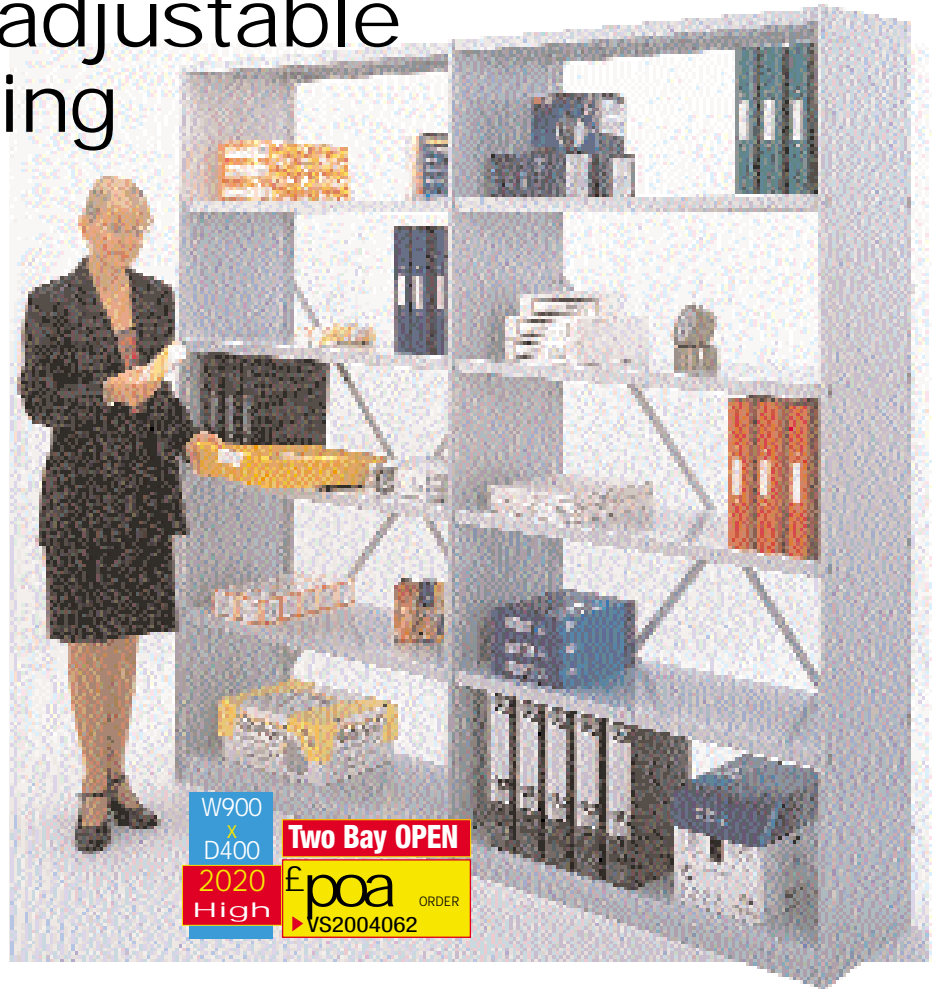

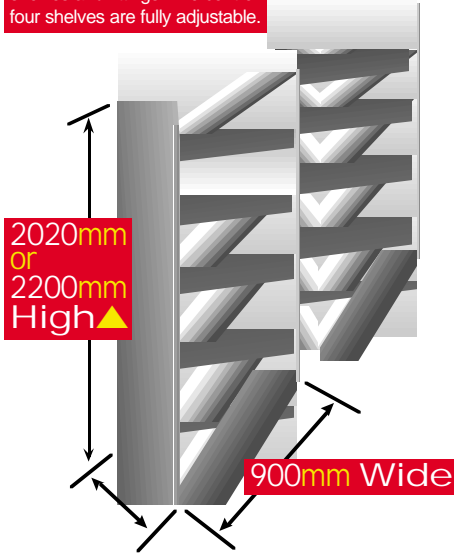

Easy to adjust
easy to add to ...

Easy order adjustable office shelving

Everything you need in one easy order ...

All bays come complete with six shelves and fittings. The centre four shelves are fully adjustable.

Mobile shelving

Why not let us show you how to create up to 50% extra storage space

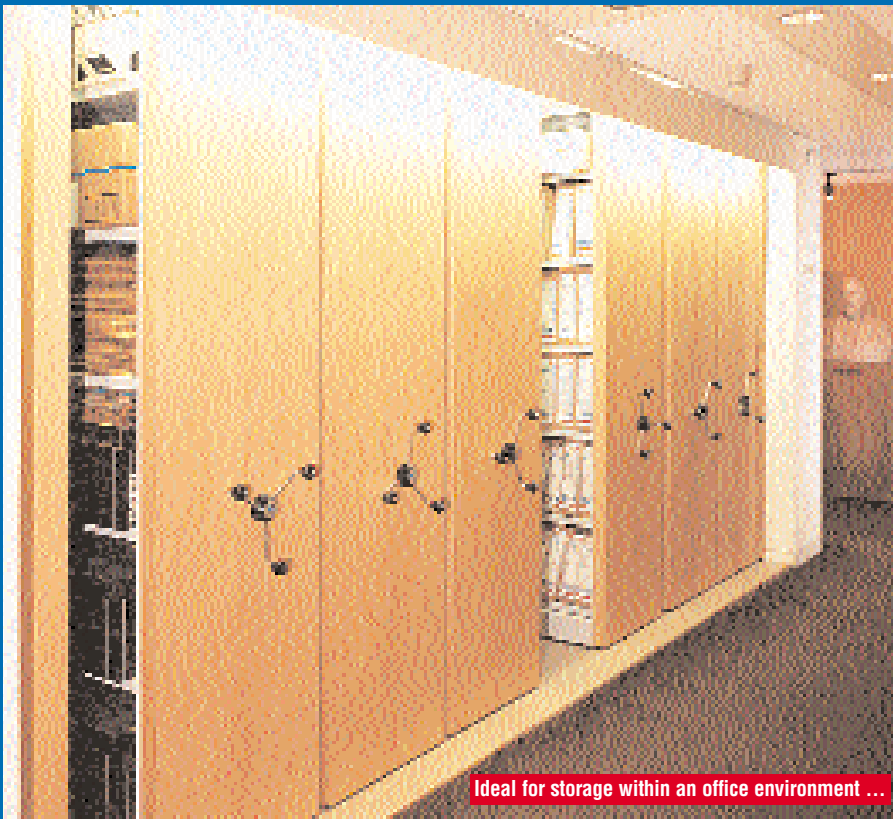

Electronically operated longspan shelving ...

Archive document storage ...

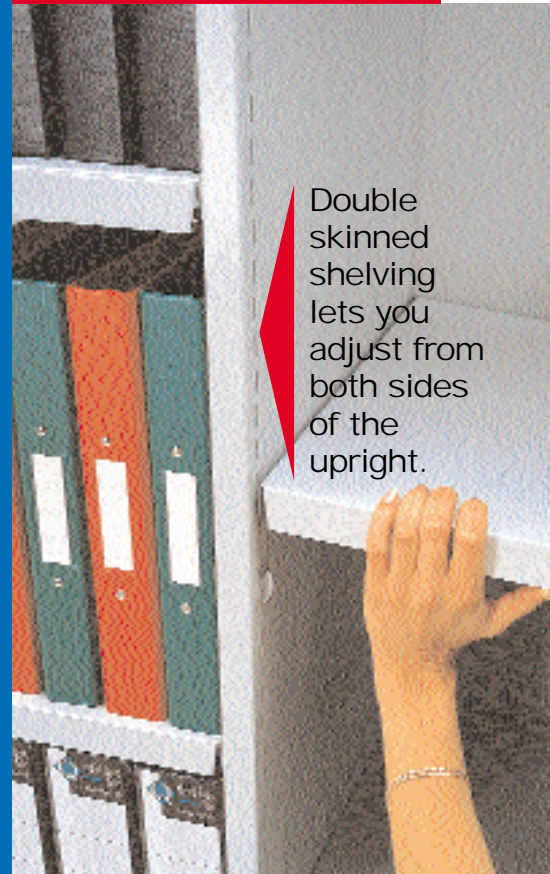

All of the shelving systems that we have shown to you in Storage Direct are suitable for mounting onto mobile bases!

Static shelving relies on separate aisles to enable access to stored items - however, with mobile shelving, you only need one aisle for access to the shelf locations. By mounting the shelving units on a steel mobile base system, which run on floor tracks, the units can be opened and closed as required. So, in effect, one aisle does the work of several and this results in the overall storage capacity being increased - freeing valuable space for other uses - also, the closed aisles bring added security to stored items. Mobile bases will fit to most new or existing bays of shelving.

Ideal for storage within an office environment ...

Use mobile shelving, and you'll get up to 10 bays into far less space than 5 static shelving bays. Mobile shelving means floorspace costs can be cut dramatically, along with the other costs such as heating, lighting, and general building maintenance.

Double skinned shelving lets you adjust from both sides of the upright.

Storage Direct

for all the storage systems you need in your office

The difference between single and double skinned shelving is quite subtle - yet often very important

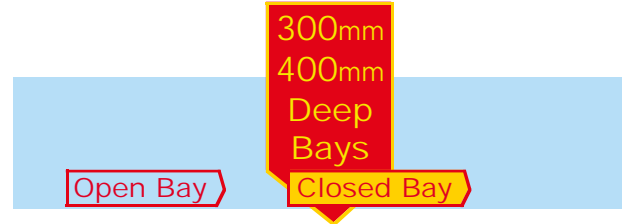

If you compare the double skin shelving shown here with the single on the previous page, you will notice very little difference between the two. Indeed the styles are very similar and the shelves are the same, however it's the uprights that make all the difference between the two systems.

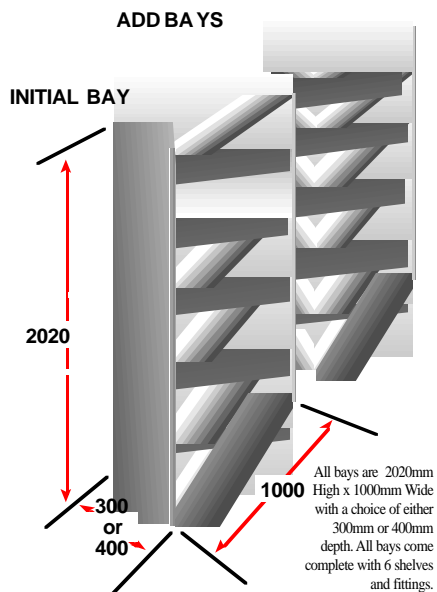

Both types of shelving are fully adjustable however the single skin uses a common clip that accepts the shelf. This protrudes through the upright and although not essential, is often used to support the shelf in the adjacent bay. In any case the clip does protrude into the next bay that can in certain circumstances

mean that space is wasted or important files can be marked.

This option often makes absolutely no difference to many users. However, the alternative is to have these better looking double skinned bays, that take shelf clips from both sides without any wasted space.

Filing and storage around the office

Security cupboards ...

Strong, robust Office cupboards to create inexpensive and secure storage. To many people - not quite as versatile or good looking as our tambour cupboard range shown opposite, however the strong two point lock together with steel doors and a sturdy frame, often makes this cupboard a more suitable answer to your storage requirements, particularly if its security you need. A combination of the two are often used.

Supplied complete with either one shelf in the smaller cupboard or three shelves in the taller options.

All cupboards are supplied complete so there is no awkward 'on site' assembly.
