

# WHEN YOU NEED TO MOVE UP TO 500KG

May we suggest that a choice from our extensive range of brightly painted, firm loading or balanced platform trucks would be a good idea. This range uses a robust welded construction with removable panels in both timber and zinc plated mesh steel. Castors are all industrial grade 200mm diameter roller bearing - two fixed and two swivel.

Easy to buy and easy to change or add to later - as your needs alter.

For extra strength exterior grade plywood is used on the decking. These trucks are available in a variety of sizes to suit your needs - don't forget that a 600mm wide truck will fit through most standard size doorways.

Alternatively we offer a range of zinc plated trucks on the opposite page - which are used when needed to comply with cleanliness, appearance or harder wearing requirements within industry. Equally as strong as the painted platform trucks this range helps to present a complete answer to your movement needs.
